

Examination

Analysis of Survival Data Fall 2025

The examination of the course in Analysis of Survival data consists of three home assignments, one oral presentation of one of the home assignments, and one in-class examination. You will get credits for the home assignment part and the in-class examination separately, but the course will be marked as complete only if you pass both parts.

Home assignments

There will be two (stat students) or three (math students) home assignments posted at Studium. The assignments are to be solved in groups of 2 (max 3) students.

General information about the home assignments can be found in Studium, as well as separate instructions for each of the three home assignments.

If you pass a home assignment on the first try you get 2 bonus points for the final in-class examination. I.e., you can get a total of 4 (math students) or 6 (stat students) bonus points from the home assignments, which will be added to the points you score on your exam.

Oral presentation of home assignment (seminar)

Home assignment 2 is to be presented orally at a seminar, in your home assignment groups (date provided in the schedule). You have 12 minutes to present to the class with roughly 3 additional minutes for questions.

To pass this task, each individual in the group has to present and be able to answer questions from the audience. You will get individual feedback, and you can get up to 2 bonus points to be added to your exam score.

You can get one out of two grades for the home assignment part of the course: Pass/Fail (G/U). To pass, you must pass all three assignments and the oral presentation.

Bonus points for attendance

You can earn bonus points for the exam if you complete online lectures and in-class sessions:

- Students who watch all 6 online lectures on time receive 2 bonus points on the exam
- Students who attend 6/7 of the in-class sessions receive 2 bonus points on the exam

Examination

Analysis of Survival Data Fall 2025

In-class exam.

Information about time and place are to be found in Ladok. Remember to sign up for the exam!

You are allowed to bring:

- Lecture handouts (hand written notes are not allowed)
- ISI Declaration on professional ethics/ASA Ethical guidelines for statistical practice/RSS Code of conduct

A calculator and ruler are also allowed (graph calculator is allowed), but perhaps not necessary.

You can get one out of three grades for the in-class exam: Pass with distinction/Pass/Fail (VG/G/U). The course grade will be determined by the in-class exam grade, including any bonus points from the home assignments (provided that you pass all home assignments) and attendance. To pass the exam (G), you need to score 60%, including any bonus points.

To pass with distinction (VG), you need to score 90%, including any bonus points.
